# 4-Port Wired-Only Router

Product Information

You don't have to give up WiFi and give up performance along with it! Nor do you have to pay through the nose. We're offering this top-of-the-line Wired-only Internet Router for our customer's ease-of-use. This plug-and-play router (ready to power up and plug in) is ready to go and enables you to use your Internet connection with multiple devices - computers, TVs, printers, tablets/phones, etc. If you don't want WiFi at all - this is the best way to ensure it. Get a Cable or Fiber modem with no wireless capability, and hook it up to this router, which also has no wireless function or capability at all. This will allow you to network your devices the old fashioned way - fast, reliable, and free from microwave radiation.

Just plug your Cable Modem into the Internet port - and your devices (computers, TVs, etc) into eth 2, 3, 4, and 5. If you need more ports, simply hook up a Gigabit network switch and expand and hook up dozens or even hundreds of devices.

There are a couple other routers available by other manufacturers - TP-Link for example. These have been recommended by some EMF Consultants. However, the performance of these routers comes nowhere near to the performance of our wired router. Tests of, for example the TP-Link TL-R600VPN router, show that it's WAN speed (Internet) is not capable of full Gigabit speed. It is only capable of 1/4 of that speed - or about 250 megabits per second. Our router is built for high-performance and ruggedness - withstanding both higher and lower temperatures - optimized power consumption - and pure speed with features available for advanced users if desired. We used to carry another model, the ER-X or Edge Router X, but have since upgraded to this latest router which is even better!

Features:

- Gigabit speed WIRED networking
- 4 Metal Ethernet Ports - Optimal for [Shielded Ethernet Cables](#) and Grounding
- Plug-and-Play design - no configuration or setup necessary
- Also supports POE
- Supports latest networking features such as Routing, NAT, Firewall, VPN, IPv6, QoS, and much more with what is perhaps the industry's most advanced firmware

Includes:

- 1 ElectraHealth Wired-Only Router with 4 Available Ethernet Ports

How to use:

This Router will require a general knowledge of networking to set up. If you are not familiar with Networking equipment, we strongly encourage you to consider the support plan that is offered for the router at time of purchase.

When connecting your networking equipment for the first time, please make sure that you have all of the following devices powered **OFF**:

1) Modem
2) Router
3) Laptops/Desktops/Tablets/Ipads that would have an ethernet connection to the router

Make your ethernet connection from the Modem's WAN port to the Internet port on the back of the router. (Eth 1 or PoE In)

1) Power-On the Modem ONLY
2) Wait 2 minutes (120 seconds in full)
3) Power-On the Mikrotik HEX Series Router
4) Wait 2 minutes (120 seconds in full)
5) Check for connectivity by attempting to browse the internet

Further Assistance:

If you need additional assistance, we offer paid consulting services for Product Information and Setup. Please go to: www.electrahealth.com/services.html to book one of our Specialists for a Phone Consultation.
